

quarantineHelp

help elders and people in high risk
in time of **quarantine**

Covid-19 fatality rate by age:

Coronavirus is especially dangerous for older people, we should do everything possible to let them stay at home

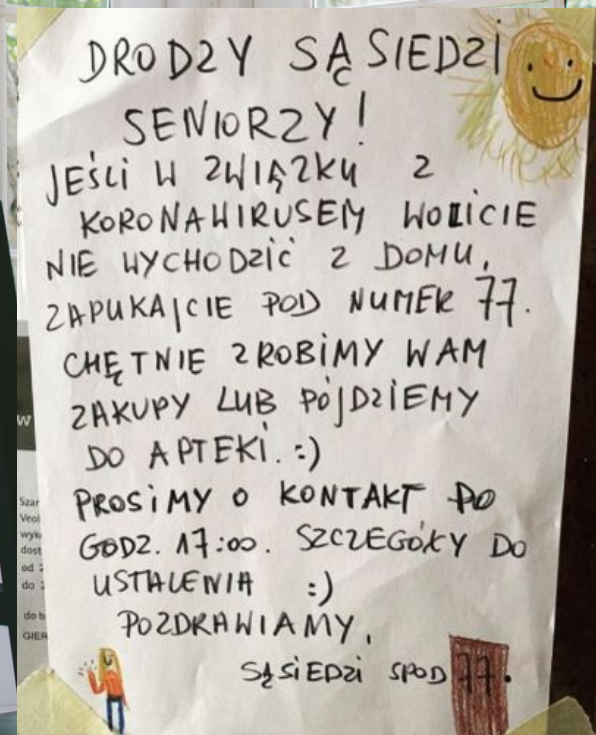

Staying at home isn't simple

It's hard to stay at home for longer when you need food, medicine or take the dog for a walk. Current pandemic may last for months, during that time, with every trip to grocery store, elderly people put their lives on risk.

Elders don't use Internet

Most of elders don't use internet and smartphones, so connecting them with volunteers is a hard task. Some of them get help from family or closest neighbours, but others have no one around to help them.

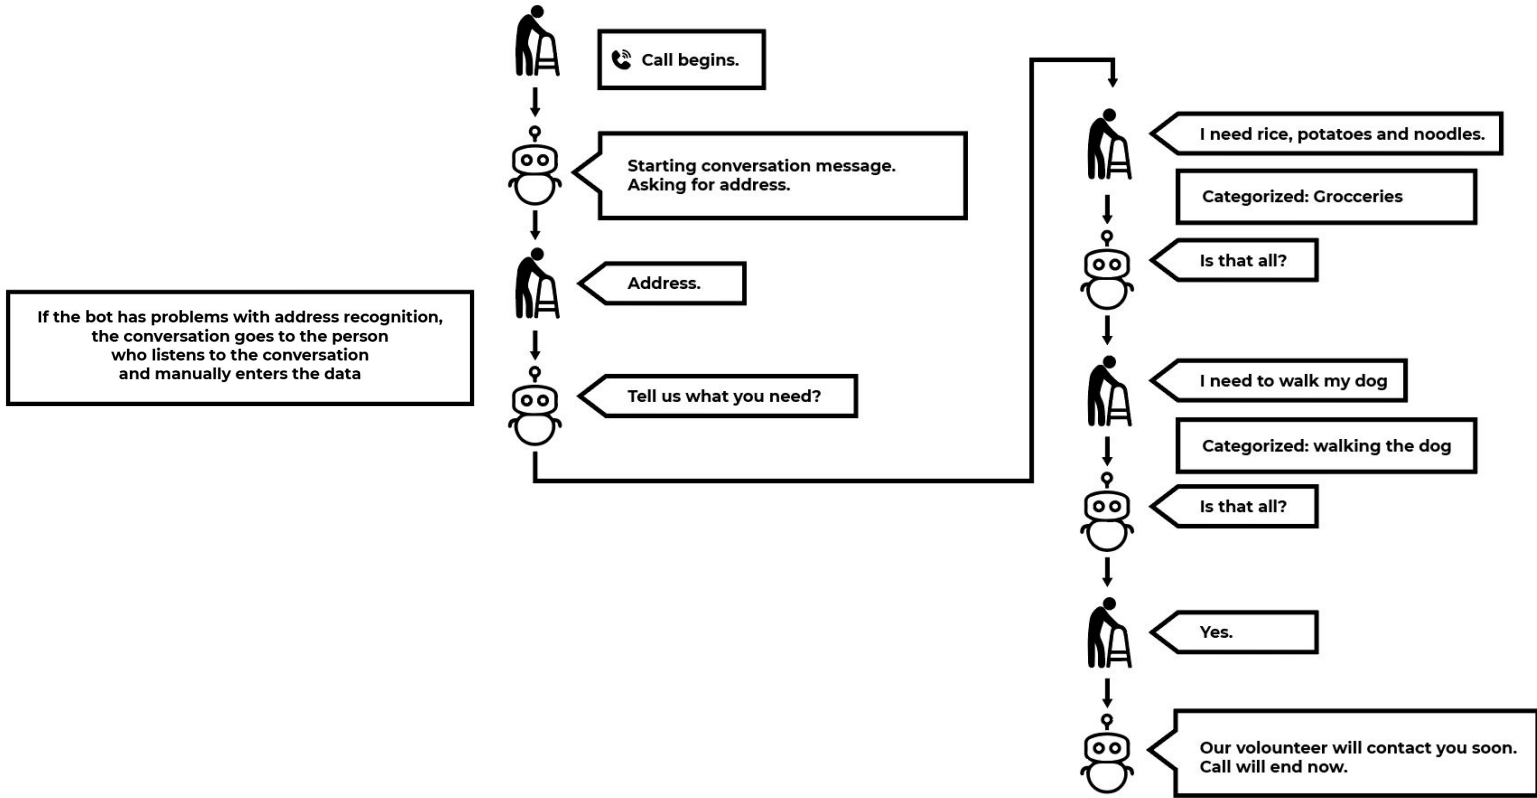

but they have **no problem making phone calls.**

Therefore, we have created a bot for telephone connections that will allow those in need to **easily contact volunteers.**

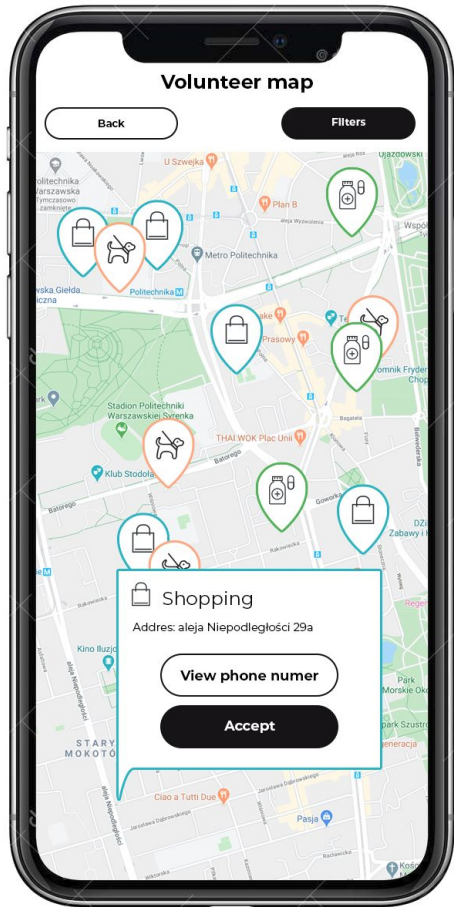

How it works?

**There are a lot of people ready to help.
We count on them.**

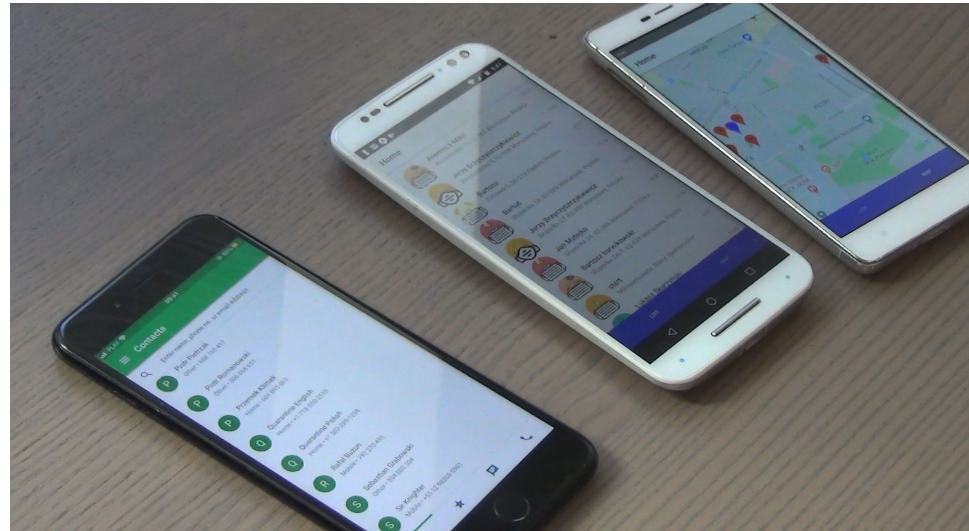

Demo of our solutions is ready.

We invite you to watch video
showing how it works.

Our organization will be non-profit.
Based on collaboration with
media, news and shops.

QUARANTINE

CONTAGIOUS DISEASE

if quarantine will be lifted for people at **low risk**, then the **threat to seniors** will be even greater than now, they will have to **stay at home**. If we want to allow them to stay at home, we need this type of solution.
