Q-You

Mobile application by SobolBud

Problem: *Due to restrictions, queues in front of the stores are huge and unpredictable*
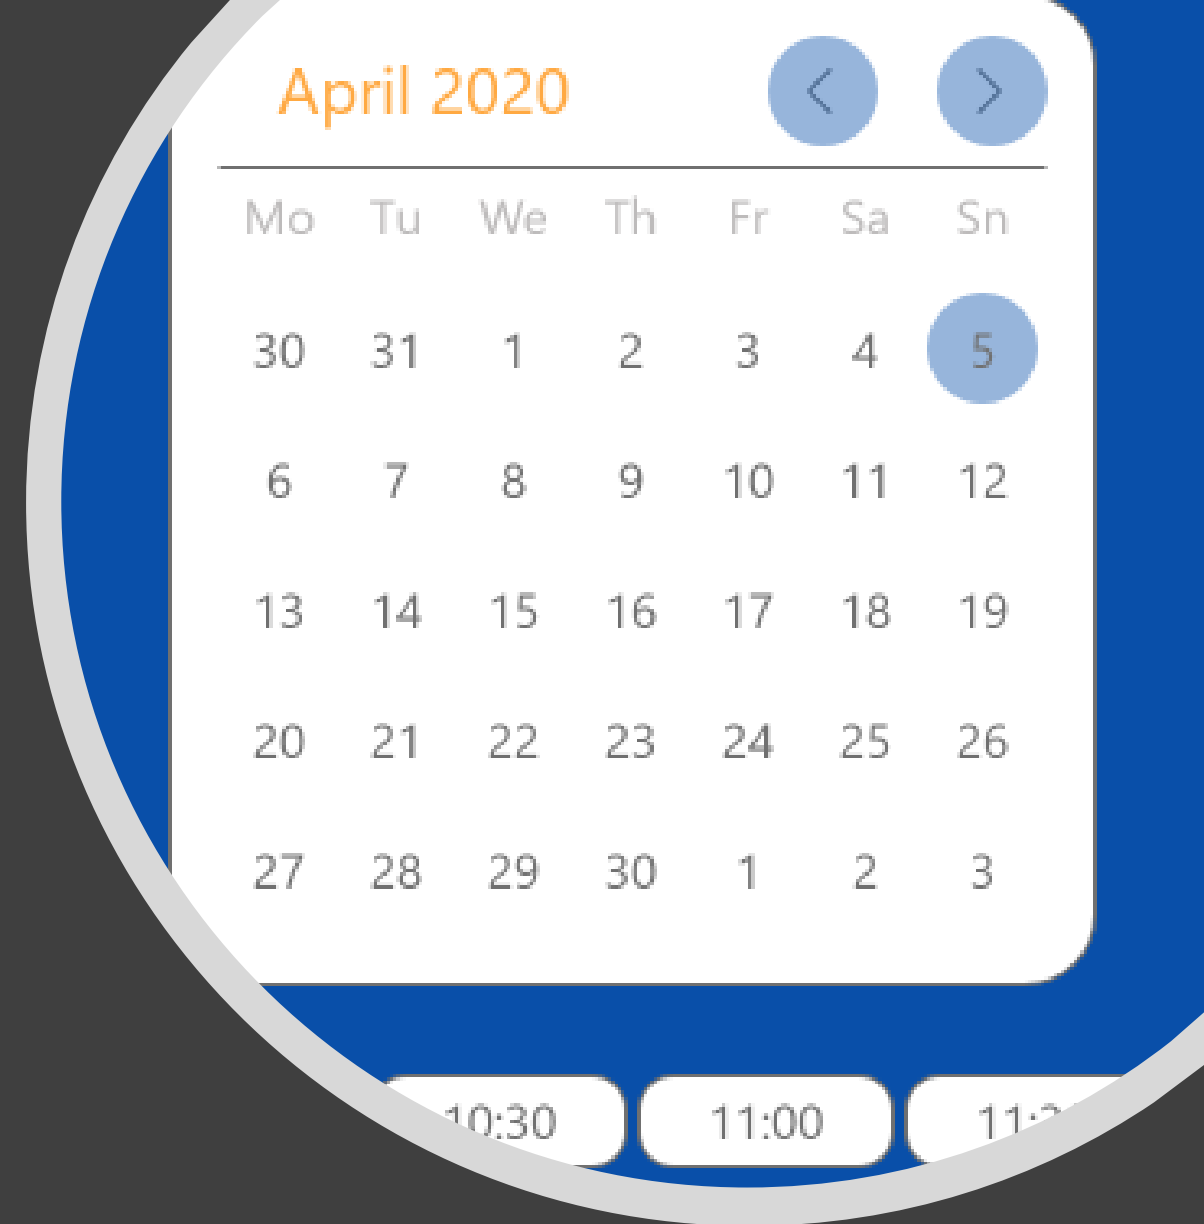

- The chance of becoming infected with SARS-CoV-2

- We do not know how much time we will spend on shopping

- We are forced to stand in crowded areas

The idea to solve this problem is to create an application, where we are able to sign up for shopping in the given location for a given hour
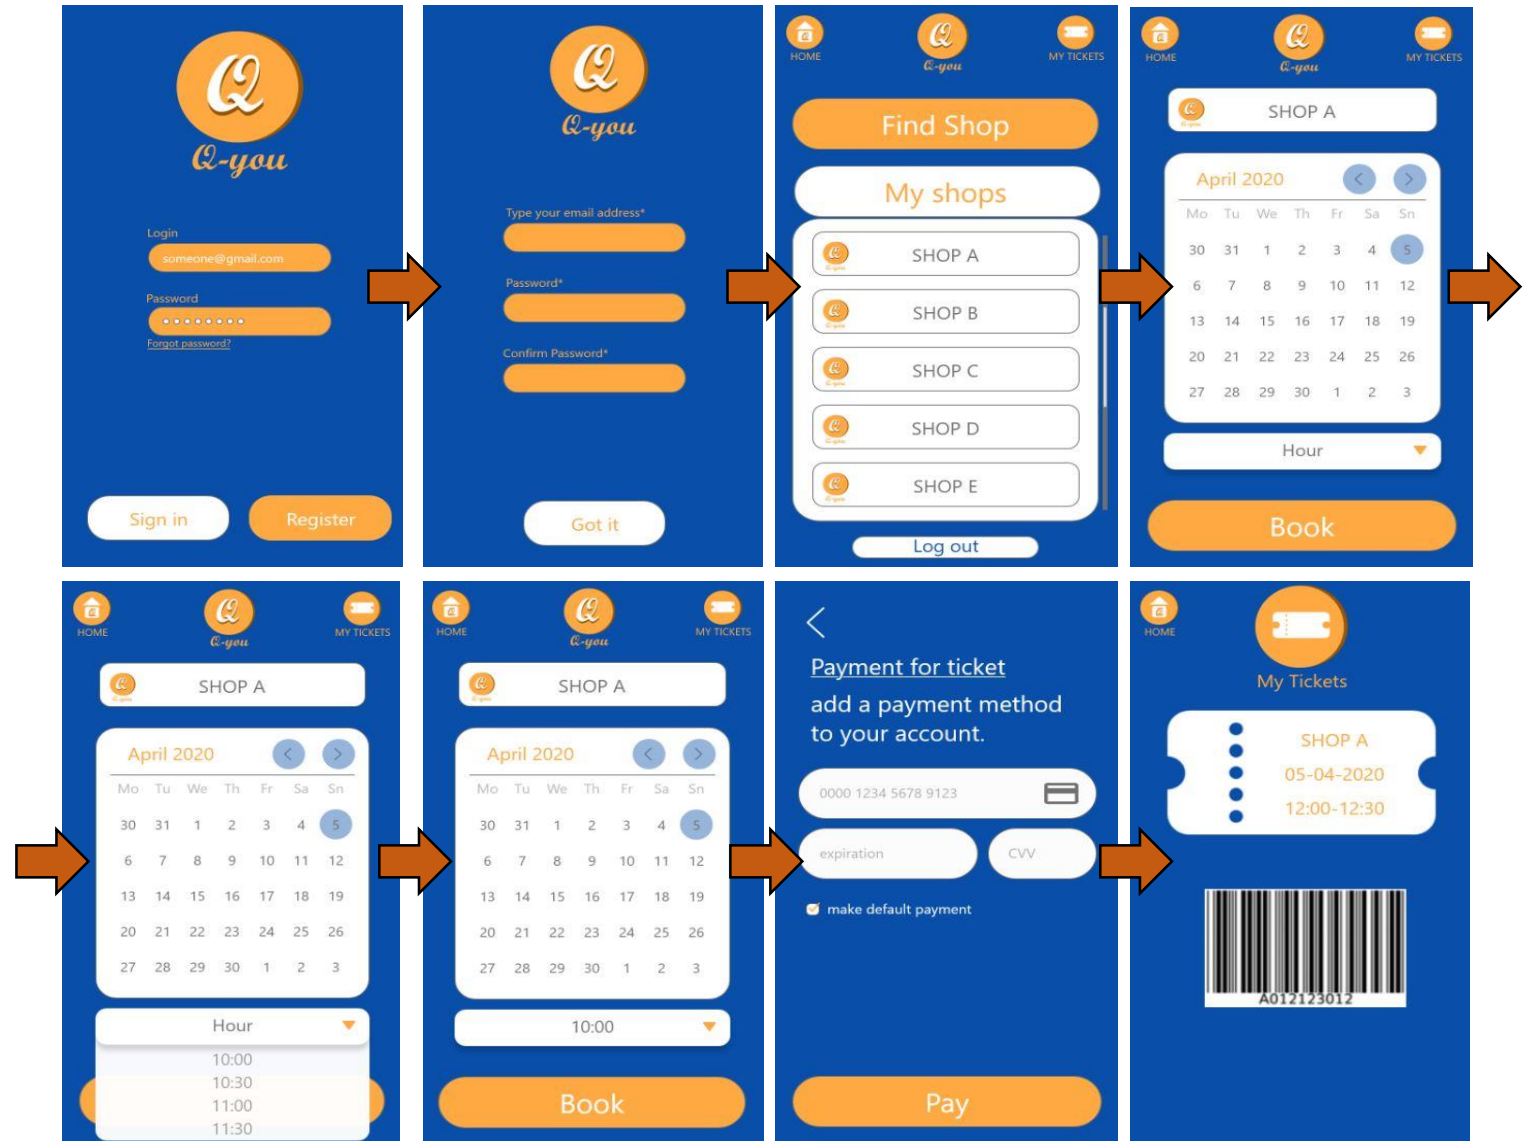

Advantages:

- Reduction of the risk of SARS-CoV-2 infection

- Saving time by not queuing in front of the store

- Motivation for faster and thoughtful shopping, so You do not block space for the next, signed people

- Financial support in the fight against COVID-19

- Application is easy to use for: customers, shop owners and store employees

Appflow

After signing up into application, there is a panel, where You can find shops in your area. You can also create a list called „My shops", where You can put your favourite shops. Moving into booking panel, You may observe a calendar and „Hour list", where You can select suitable (and available) hour for your shopping. To be sure, that customer will not extend his/her time interval for shopping there will be a small charge (e.g. 5 zł). If the client will do the shopping in his/her interval, then the receipt will be reduced by the value of charge. If the client will not do the shopping in his/her interval, then the value of the charge will be given to the charity to fight the COVID-19. The paymanet panel will automatically appear on your screen and You will have to add your payment method. Finally, your ticket for the shopping is ready to use.

Assumptions and future vision

- Shop decides how many places it gives for the application users and for people who do not use the application (e. g. max of 18 people in the shop – 12 places booked for the app users and 6 places for the people, who come from the street for the given interval),

- Some kind of payment portal must be connected to the app (e. g. PayU or Tpay),

- Barcode is created with the ticket – it is scanned before shopping at the store and at the checkout,

- There might be a map, when adding the shop to your list.

TO SUM UP
# OUR APPLICATION:

- Reduces the chance of getting COVID-19

- Collects money to fight COVID-19

- Makes shopping more enjoyable

- Makes shop employees job easier

- Saves our time
